Increase Your Sales by Using Page Turning Software

Are you looking for an effective way to increase your sales and profits as an entrepreneur or publisher? If so, then look no further way than our page turning software. By creating "flipping" books that look their very best, you may be able to attract more potential customers through your site.

Page turning programs create flipbooks. If you are, in any way, not familiar with what a flipbook is, this is actually a digital version of your published books, company magazines, journals, brochures and other documents. However, this is not any ordinary digital publication. This is a digital copy that has the ability to imitate the normal process of flipping the pages of a book or magazine in such a way that your readers will feel that they had the real copy in front of them.

Digital flipbook does not solely offer the "flipping" effect to your readers. In fact, it is accompanied with more and better features. Once you convert your PDF books or magazines into flash flip books, you may be able to change its background so that it will match with your company website theme. Through this, your site is made more attractive and entertaining for your readers and perhaps potential customers!

You can also add external and internal links on your flip book to your website or other websites. If you have a page flip of your shop's brochure, you can use the link editor to add links to the products you are selling. You can also add your email address or your company's email address for customer's support. If you want to include additional information about a certain product on your flip book, you can link it!

The position and size of the flip book interface can also be changed. Whenever a reader visits your site and views your page flip, he or she can actually resize it in any size that he or she prefers. This way, your reader can view the flash flip book no matter what their screen computer resolution is.

You can also search through the content of your flip books. When your PDF publication is converted, all the texts in the file are also extracted. This is an excellent feature for your visitors since they don't have to browse the whole brochure or magazine just to find what they are looking for.

Your digital publication is also indexed into Google. This means that your magazine or brochure, even in a digital form, can be searched through Google. Thus, this gives you more possible visits into your page. Indeed, there are endless possibilities if only you will use our flip book software.
